In brief

ChatGPT has introduced a "Try something new" section that appears below the main input box, offering ready-made prompt suggestions like movie recommendations, color theory analysis, and creative projects.

OpenAI has quietly added a new feature to ChatGPT that aims to spark curiosity and help users explore fresh ways to interact with the AI. The update, which started appearing for some users on September 24, 2025, introduces a section called "Try something new."

This new section sits right below the main input box and offers ready-made suggestions for users who may not know what to ask. Current examples include prompts like "Recommend a movie," "Help me get recognition for my..." "Make a cinematic raindrop portrait," and "Do my color theory analysis." Each suggestion is designed to show different capabilities of ChatGPT, from creativity and entertainment to productivity and visual design.

While OpenAI hasn't officially listed the change in its public release notes, the rollout appears to be experimental and gradual. Not every user may see the feature yet, but those who do will notice a more guided experience as soon as they open ChatGPT.

The update shows OpenAI's ongoing push to make ChatGPT more engaging and approachable. Instead of staring at an empty text box, users now have quick ideas that can lead to fun or practical interactions. It's also a gentle way to show lesser-known features that some people might miss.

Early reactions suggest the feature feels intuitive and useful, especially for casual users. By lowering the barrier to entry, OpenAI is making ChatGPT not just a tool for specific tasks and a space for discovery and experimentation.

The "Try something new" section may look like a small change, but it is a shift toward making AI assistants more proactive and personalized. If this test proves successful, users can likely expect more curated suggestions and interactive features in future updates.
