By Vipin PG | Published August 17, 2026 | Updated August 17, 2026 | Format: Analysis | 6 min read

In brief

ChatLLM by Abacus AI is a consolidated AI platform that provides access to 40+ leading AI models (including GPT-5.5, Claude 4.8, Gemini 3.1, and Grok 4.3) for \$10/month, replacing multiple \$20/month subscriptions with a single dashboard that includes text generation, image/video creation, document analysis, AI agents, code playground, and team collaboration features with enterprise-grade security (SOC-2 Type-2 and HIPAA compliant).

If you have been paying for ChatGPT, Claude, and Gemini separately, you already know how fast those subscriptions add up. ChatLLM from Abacus AI brings all of them, and many more, under one roof for \$10 per month. This review covers everything you need to know: what it does, how it works, who it is for, and whether the price is actually worth it. ChatLLM by Abacus AI is an "AI super-assistant" that consolidates dozens of top-tier models (including GPT-5.5, Claude 4.8, Gemini 3.1, and Grok 4.3) into a single dashboard for \$10/month.

Key Takeaways:

- Massive Savings: Replaces multiple \$20/month subscriptions (ChatGPT Plus, Claude Pro, etc.) with one \$10/month plan.
- Diverse Toolset: Beyond text models, it includes advanced image/video generation, a multi-step AI Agent for automation, and a built-in Code Playground.
- Generous Limits: Offers approximately 10x more tokens than competitors, making it highly suitable for heavy users and long document analysis.
- Team Ready: The Teams plan (\$10/user) adds shared projects, internal integrations (Slack, Google Drive), and custom chatbot deployment.
- Enterprise Security: has SOC-2 Type-2 and HIPAA compliance with a guarantee that user data is never used for training.

What Is ChatLLM?

ChatLLM is an AI super-assistant built by Abacus AI. The platform gives you access to dozens of the world's top AI models from a single dashboard. Instead of switching between apps or paying for multiple plans, you pick the model that fits your task and get to work. The platform covers a wide range of use cases: writing, coding, research, image generation, video creation, document analysis, and team collaboration. You can watch a full product walkthrough here: [ChatLLM Product Overview Video](#).

All the AI Models in One Place

This is the core value of ChatLLM. At the time of writing, the platform includes:

- Text models: GPT-5.5, GPT-5.5 Thinking, Codex 5.3, GPT-5.5 Pro, o3, Sonnet 4.6, Opus 4.8, Gemini 3.1 Pro, Gemini 3.5 Flash, Grok 4.3, Qwen 3.7 Max, DeepSeek v4, Kimi 2.7 Thinking, GLM 5.2, and 20+ more

- Image generators: Nano Banana Pro, Grok Imagine, Flux Ultra, DALL-E, Recraft, Ideogram, Seedream
- Video generation (via Abacus AI Studio): Sora 2, Veo 3.1, Kling AI v3, Seedance 2.0

Always Up to Date

New AI models drop constantly. ChatLLM updates its model library within 24 to 48 hours of any major release. So you are always working with the latest versions without having to sign up for a new service every few months.

What Can You Actually Do With ChatLLM?

Here is a practical breakdown of the main features.

Document and Data Analysis

Upload a PDF, Word file, PowerPoint, Excel spreadsheet, or image and ChatLLM will read, summarize, and answer questions about it. This is useful for reviewing long reports, extracting data from spreadsheets, or getting a quick summary of a contract without reading every page.

Image and Video Generation

Need a visual for a blog post or social media? Generate it directly inside ChatLLM using top image models. For video, Abacus AI Studio gives you access to Sora 2, Veo 3.1, and Kling AI v3, among others. Having image and video generation in the same platform as your writing and research tools saves a lot of time.

AI Agents and Task Automation

ChatLLM includes Abacus AI Agent, a general-purpose agent that can handle multi-step tasks on your behalf. You describe what you want done, and the agent works through it step by step. This includes things like deep research reports, automated workflows, and building custom applications through a feature called vibe coding. There is also a built-in Code Playground where you can write, run, and test code directly in the chat interface. For more serious development work, Abacus AI Desktop functions as a full AI-powered code editor.

Team Collaboration

ChatLLM Teams lets you invite colleagues, create shared projects, and connect to internal tools like Google Drive, Slack, Confluence, Gmail, and Microsoft Teams. You can also build custom chatbots trained on your company's data and deploy them for your team.

ChatLLM Pricing: What You Pay and What You Get

ChatLLM costs \$10 per user per month. There is no free tier, but the value at this price point is hard to match. Here is a quick comparison:

Platform | Monthly Cost | Models Included

ChatGPT Plus | \$20 | GPT-4o, o3

Claude Pro | \$20 | Claude Sonnet, Opus

Gemini Advanced | \$20 | Gemini 1.5 Pro

ChatLLM | \$10 | GPT-5.5, Claude, Gemini, Grok, DeepSeek, and 20+ more

If you currently pay for two or three separate AI subscriptions, ChatLLM likely covers everything those services offer at a fraction of the cost. Usage limits are also generous. You can send thousands of messages on top models like GPT-5.5, Sonnet 4.6, and Gemini 3.1 Pro without hitting a cap. Abacus AI states that ChatLLM provides roughly 10 times more tokens than comparable paid services. Large file attachments may trigger rate limits, but the platform automatically switches you to another model if that happens. For teams, billing scales at \$10 per user per month with no cap on the number of users you can invite.

ChatLLM Teams: Built for Collaboration

ChatLLM Teams is designed for businesses and groups that want to use AI together. Key features include:

- Shared projects and conversation history
- Custom chatbots built on your internal data
- Integrations with Slack, Teams, Google Drive, Gmail, Confluence, and Google Calendar
- Role-based access and team management
- Centralized billing with per-user pricing

For small businesses and startups, this removes the need to manage multiple AI tool subscriptions across a team. Everyone works from the same platform, with access to the same models and tools.

Data Privacy and Security

This is a common concern with AI platforms, and ChatLLM takes it seriously. Key points:

- Your data is never used to train AI models
- All data is encrypted at all times
- The platform holds SOC-2 Type-2 and HIPAA compliance certifications

For businesses handling sensitive information, these certifications matter. Not every AI platform can say the same.

ChatLLM vs ChatGPT and Other Alternatives

ChatLLM is a strong ChatGPT alternative for anyone who uses more than one AI model regularly. The main differences:

- Model variety: ChatGPT gives you GPT models. ChatLLM gives you GPT, Claude, Gemini, Grok, DeepSeek, and more.
- Price: ChatGPT Plus costs \$20/month for one model family. ChatLLM costs \$10/month for all of them.
- Features: ChatLLM includes AI agents, vibe coding, team collaboration, and video generation in one platform.
- Interface: ChatGPT has a cleaner, more polished interface. ChatLLM packs in more features, which takes a little time to learn.

For a detailed third-party perspective, the KDNuggets ChatLLM review and the Abacus AI platform review both offer honest assessments worth reading.

Who Should Use ChatLLM?

ChatLLM works well for:

- Freelancers and solopreneurs who need writing, research, image, and coding tools without paying for five separate apps

- Small teams and startups that want AI collaboration features without enterprise pricing
- Students and researchers who need access to multiple models for different types of work
- Developers who want to experiment with vibe coding and AI-assisted app building
- Non-technical creators who want to build tools or automate tasks without writing code

It may not be the best fit for large enterprises that need dedicated support, custom SLAs, or deeply integrated enterprise systems.

Final Verdict

ChatLLM delivers genuine value. For \$10 a month, you get access to more AI models than any other single platform, a capable agent for task automation, team collaboration tools, image and video generation, and strong data privacy standards. The interface has a learning curve, and it is not as polished as some single-model platforms. But if you are looking for a multi-LLM platform that covers most of your AI needs in one place, ChatLLM is one of the most cost-effective options available right now. Try it for a month. At \$10, the risk is low and the upside is real. You can Get started with ChatLLM

Frequently Asked Questions

Is ChatLLM free?

No. ChatLLM costs \$10 per user per month. There is no free plan, but the subscription includes access to dozens of top AI models.

Can I cancel my ChatLLM subscription?

Yes. You can cancel anytime from the ChatLLM interface. Your subscription stays active until the end of the billing period.

Does ChatLLM use my data for training?

No. ChatLLM does not use your data to train AI models. All data is encrypted and the platform is SOC-2 Type-2 and HIPAA compliant.

How many users can I add to ChatLLM Teams?

There is no limit. You are billed at \$10 per user per month, and new users are billed immediately on a prorated basis.

Is ChatLLM a good ChatGPT alternative?

For users who want access to multiple AI models at a lower price, yes. ChatLLM includes GPT models alongside Claude, Gemini, Grok, DeepSeek, and many others, all for \$10/month.

What is the difference between ChatLLM and Abacus AI?

Abacus AI is the company. ChatLLM is their AI super-assistant product. Abacus AI also offers enterprise ML tools, but ChatLLM is the consumer and team-facing product.
