Prerequisites

Steps to Enable Developer Options

Follow these simple steps to enable developer options on your Android phone:

Step 1: Open the Settings app on your Android device. You can find the Settings app in the app drawer or by tapping the gear icon in the notification panel.

Step 2: Scroll down to the bottom of the Settings menu and tap on the "About phone" or "About device" option. This will open a screen displaying information about your device, such as the model number, Android version, and more.

Step 3: In the "About phone" section, locate the "Build number" entry. It is usually found at the bottom of the screen.

Step 4: Tap on the "Build number" entry seven times in quick succession. After the first few taps, you will see a message that says, "You are now X steps away from being a developer," where X is the remaining number of taps required.

Continue tapping until you see a message that says, "You are now a developer!" or "Developer mode has been enabled."

Step 5: Go back to the main Settings menu, and you will now see a new option called "Developer options" just above the "About phone" section.

Tap on "Developer options" to access the various advanced settings and customization options available for developers and advanced users.
