Quick answer

To change default apps in Android 9 Pie, go to Settings, then Apps & notifications, then Advanced, and tap Default apps. Select the category you want to change, such as browser or messaging, and pick your preferred app from the list of installed options.

As like the other versions of the Android, Android 9 Pie also allows users to change the default app selection for various option. In most of the Android mobiles now, the default browser app is Chrome, similarly the messaging application has been set as Google Message and the dialer application is set as Google Phone app.

If you need to change the default application, whether it is browser app or the messaging application, you can set it from the Settings. The settings cannot be found out easily for some users in Android 9.

Follow the below steps to set or change the default app selection for your Android Application.
