Quick answer

With Photoshop, users might experience different issues depending on the use and the other aspects. Issues like Drag and drop on Photoshop pop up while trying to import an image or file to photoshop.

With Photoshop, users might experience different issues depending on the use and the other aspects. Issues like Drag and drop on Photoshop pop up while trying to import an image or file to photoshop. However, on the other side, an issue like photoshop won't open makes users a bit disappointed. No work can be done in such cases.

How to Fix Photoshop Wont Open Issue on laptop and PC

There are multiple reasons for the issue and if photoshop won't open on your pc or laptop, follow the troubleshooting methods below to fix it.

Please note that the following methods include simple steps to more advanced stages, you can try each step, and in some cases, the issue may get fixed by a simple restart. To verify whether the issue is resolved after trying each step.

Restart the PC

The first and foremost step to fixing any issue is a restart. Restart your PC or the Laptop and check whether the photoshop won't open problem is fixed or not. If not, you can proceed with the next step.

Run As Administrator

In some cases, due to the permission issue, photoshop won't open for non-administrator access. In that case, you need to open Photoshop as an administrator. To do so, right-click on the photoshop app icon on your PC/Laptop and select Run as administrator. Most probably, the issue will get sorted in that case. If not, proceed further with the next step.

Using Adobe Creative Cloud Cleaner Tool

Another way to fix the issue related to Adobe products is by using Adobe Creative Cloud Cleaner Tool. This tool is used to fix the corrupted files of Adobe products, including Adobe Photoshop. If the issue is due to any corrupted adobe files, the Adobe CC Cleaner tool will fix it.

Reinstalling the Adobe Software

Another way to fix the Photoshop won't open issue is by reinstalling the software. To do so, first, you need to uninstall photoshop from the pc/laptop. Then restart the pc/desktop and install the photoshop software on your laptop. If the problem is due to the installation file error, it might be fixed with the photoshop reinstall process.

Force Start the Photoshop App

The final solution is a simple trick that will likely fix the photoshop wont open issue. To do this trick, follow the below steps.

Step 1: Open the Task Manager on your Windows. You can also click on the CTRL+SHIFT+ESC key to open the task manager.

Step 2: Click on the File and then select New Task.

Step 3: In the text box, you need to write photoshop and click the OK button.

Now, the Task manager will create a new process called photoshop, and it will start the process automatically, and you will see the photoshop app start running on your Windows PC/Laptop.

Conclusion

Photoshop wont open issues may happen due to multiple reasons. The steps and tricks mentioned above are some common and quick fixes to solve the photoshop won't open issue. If you find any other way to solve the issue, you can let us know in the comment section below.
