In brief

Alienware is a brand of high-end gaming laptops, desktop computers, and monitors. The brand was founded in 1984.

Alienware is a brand of high-end gaming laptops, desktop computers, and monitors. The brand was founded in 1984. Many people are considering whether or not the value they provide is worthwhile. This article will provide information regarding the advantages and disadvantages of purchasing a laptop or computer manufactured by Alienware, allowing you to make an informed choice. We will also discuss whether or not we believe it is a good idea for you to purchase a laptop or desktop computer manufactured by Alienware. If you are interested in learning more about Alienware's notebooks and desktops, continue reading.

A Quick Overview of the Alienware Company

Alienware was founded in 1996 by Nelson Gonzalez and Alex Aguila, who had known each other since college. Both of them were gamers who were frustrated by the lack of possibilities for playing games on portable devices of a high enough quality, and as a result, they decided to make their own. Alienware's first product was a laptop called the Area-51m; it was released in 1997.

Thin & Light Screen With Powerful Processor

The Alienware 17-inch laptop is a well-known gaming laptop because of its 17-inch screen and great performance. The thinner and lighter its screen is, the more heavy the performance this 17-inch laptop gives its user. The laptop is made of an aerospace-inspired carbon fiber-filled surface which makes the laptop quite durable. The laptop also has a copper heat sink which properly cools the laptop when running any heavy game. It comes with an HD 4K display loaded with Indium Gallium Zinc Oxide technology. And if we talk about the processor of the laptop, then it has a 6th generation Intel Core i7 processor with dynamic overclocking on the K series CPUs. This processor is so powerful that most heavy games can run smoothly without lag. In the laptop, you get to see new USB Type C ports, which support 10 Gbps super speed transfer. In addition, it has excellent speakers, which alone can deliver quite a superb sound experience. But if you pair them with an optional Alienware graphics amplifier, your Alienware 17 will become the ultimate home entertainment system. By optimizing all kinds of colors, the Alienware 17inch laptop display shows colors amazingly while gaming or watching movies. In addition, the 6th generation Intel Core i7-powered processor is surprisingly fast, has built-in security, and will be ready to handle any heavy task. So you will not regret playing any kind of gaming on the laptop.

Amazing Gaming Experience

We have played all kinds of games on the laptop, even with the high graphics setting, and we must say that the laptop runs all those games quite amazingly. The laptops come with GeForce GTX 1060 graphics card and 6 GB GDDR5 VRAM. This impressive graphics card can deliver a fantastic game FPS of 60+. We played the Rise of the Tomb Raider game at a high resolution on this laptop. The laptop was quite capable of running games at 67 fps. We also played the Hitman game and saw 99 fps on high settings. With the help of its powerful graphics card, it has given an excellent FPS rate in many other games too. This laptop is perfect for gamers looking for a gaming laptop with a high-end graphics card. In addition, the graphics card works wonderfully with 6th generation Intel Core i7 processors. Both these features work pretty amazingly together and provide a powerful gaming experience to its user.

Superior Finesse And Technical Skill

Utilization of carbon fiber with expertise: The carbon fiber composites used in Alienware laptops are derived from aerospace technologies and offer a high stiffness-to-weight ratio and outstanding rigidity. The carbon fiber's exceptional rigidity provides these benefits. However, because of this, feeling things is entirely different from what it used to be. Sleek. Solid. It has an anodized aluminum exterior that is consistent with the strength of the hinges and the structural stiffness, combined with an easily recognizable and utterly new look. Using copper makes it feasible to generate maximum power without causing the system to overheat. Graphics cards and central processing units (CPUs) can achieve their utmost potential thanks to thermal modules made of copper. These modules, in conjunction with heat pipes and blocks, prevent the components from becoming too hot. We guarantee there will be no errors until the product has been used 10,000,000 times: The reinforced steel plate on our TactX keyboard offers consistent feedback and protects the internal components from contamination by dirt and dust. In addition, the Alienware laptop Command Center software allows you to designate up to 15 distinct functions to each of the five programmable keys on your Alienware gaming keyboard. Laptops sold under the Alienware brand are subjected to tens of thousands of tests, including depressing the power button, opening and closing the lid, twisting and tilting the laptop, and using the touchpad as many as one million times. We put our products through extensive testing to ensure that you will always be able to compete at a high level.

External Chassis Connections

1. A Reader Capable of Reading All Three Varieties of Media Cards
2. A port that uses the USB Type-C™ standard and enables simultaneous use of both the SuperSpeed USB 10 Gbps and the Thunderbolt™ 3 transfer methods
3. Ultra-High-Speed USB (UHS-USB) 3.0 Ports
4. The RJ-45 Gigabit Ethernet IPv6 Alienware Graphics Amplifier Port is number four on the list.
5. An output through HDMI (2.0 output with NVIDIA, 1.4 output with AMD)
6. Power/DC-in Jack
7. Noble Lock port (cable and lock sold separately)
8. Headphone Port with a Configurable 1/8-Inch Diameter (also suitable for use as a Line-In or Microphone Analog Audio Input)

Your Alienware Laptop Requires These Essential Accessories In addition to the Alienware Graphics Amplifier, gaming headsets, a wireless touch keyboard, and other accessories, you can round out your purchase with an Alienware 17-inch laptop. Plus, the warranty information and services provided by Dell Support help save time and effort.

Do You Know Where Alienware Computers And Laptops Are Headed In The Next Decade?

Desktop and portable computers manufactured by Alienware are built to have a lengthy lifespan. They are expensive, but if you plan on making upgrades or purchasing additional parts in the future, it will be money well spent to get them. Due to issues with malfunctioning keyboards and other hardware, many of Alienware's customers have expressed dissatisfaction with the company's customer assistance in the past.
