Many users worldwide are asking, is the GB WhatsApp App safe to use? WhatsApp is a constantly updating application, and so many changes come in between these times. So it varies from the features to the privacy. At the same time, we can see WhatsApp has introduced a lot of features this year.

Is GB WhatsApp Safe

However, there are a large number of people who are still looking for an alternative application for WhatsApp. In that, the most popular name was GB WhatsApp. People ask questions on the web, asking whether it is safe to use GB WhatsApp; features in GB WhatsApp are an alternative to WhatsApp.

Now, we will answer all these questions. But first, let us see all the facts in detail.

What is GB WhatsApp, and is it an alternative to WhatsApp Official App?

GB WhatsApp is an unofficial modified version of the WhatsApp application, and many people use it as a WhatsApp alternative. The application developers changed the original WhatsApp with custom functionalities and features.

GB WhatsApp has many additional features to the original WhatsApp, such as the Custom privacy feature, where you can hide your last seen and online status, but you can still see others. This feature was not available in Official WhatsApp. In addition, if you go for GB WhatsApp download, the application also provides a custom theme feature, where you can change the look and feel of WhatsApp as you like.

Why People Are Using GB WhatsApp on their Mobile ?

There are two cases in which people are using GB WhatsApp. The first case is for more features on their WhatsApp account, which is still unavailable in the official application. The second case is to use a 2nd WhatsApp number on the same mobile.

Is it safe to use GB WhatsApp ?

Still, we cannot exactly say whether it is safe. But we never recommend using this on your mobile. The application is not an official version of the application. It is the only custom-modified version of the original WhatsApp. The application was not at all modified and managed by any official firm.

Since any damage or mishaps to the mobile is always the user's responsibility, you cannot complain to anyone. So we are only mentioning the possibility and not claiming it is dangerous. But the fact is that since it is not scanned and verified by the Google Play store. So there is also a chance of being affected by any malicious codes or attacks.

Overall, GB WhatsApp privacy is a big concern for some users. In that case, also, you will not be able to complain to anyone, and if anything happens to the mobile will be your sole responsibility. But hopefully, nothing will happen like that.

What is the official alternative for GB WhatsApp in this case ?

Some good options are available if you are looking to use GB WhatsApp as the second WhatsApp account on the same phone. You can download any clone application from the Play Store, such as Parallel Space.

This application clones your existing WhatsApp on your phone, and you can use 2nd account using the Clone application. The cloned application is not at all the modified version. It is just the exact copy of the official application installed on your mobile, and it is always safe as the original WhatsApp.

In What case can I use GB WhatsApp ?

If you are still looking for the original WhatsApp customized version, you can go for GB WhatsApp itself. But it will be more secure if you use this application on your secondary phone where you don't mind privacy. Also, it will be better to avoid using this on a mobile where banking applications are installed (To ensure safety).

Keeping all this in mind, we can say that it is OK to use the application on mobile if you consider all the above factors. It is also to be noted that GB WhatsApp will never give you any new functionality unavailable in the official version. It is only showing you a customized version of all the existing features.

We never recommend any unofficial version of WhatsApp to be used on mobile. Always go for the official version. And forget about the customization if possible.
