In brief

Are you looking for a reliable video player with powerful hardware acceleration and great subtitle support? If yes is your answer, then you should download the MX player app right now itself.

Are you looking for a reliable video player with powerful hardware acceleration and great subtitle support? If yes is your answer, then you should download the MX player app right now itself. MX Player is a famous media player and streaming services app available for users. You would be glad by knowing that it is the only entertainment app that easily combines all types of entertainment in a single platform- audio music, offline video player and audio music. All famous TV shows and the latest movies will be available in the MX Player app for free to the users.

With the help of this app, you would have access over more than 10,000 hours of content which includes TV shows, Movies, Music Videos, Web series and news channels in more than 10 regional languages. You can watch some of the popular shows like Big Boss, KBC, and The Kapil Sharma by using the MX Player app. Also, it is completely to watch and you do not have to pay anything for using it for sure.

While opening this app for the first time, it will scan automatically all the media files on your Android smartphones. You do not have to add them manually to the player. But, if your media players are not getting scanned automatically, then you can manually add the file extension of the media files so that the app would add your all files whenever you are opening this app. The time, battery status and file name can be easily viewed at the screen top. By seeing the time and battery status, you will be able to track the video duration or if your device needs to connect to a power charger.

It would be better for you to understand that all scanned media files will appear on the main menu. You can take the help of the search button in the upper-right portion of the screen to search your media file. For listening to your favorite videos or music, you can tap the media file and the app would show you the viewing screen. You should understand the user-interface of the app is very simple and easy to understand for the users. You are not going to face any trouble at all while using it for sure. You can also watch the content over bigger screen using the inbuilt cast option with the help of Chromecast.

There is also an updated app where you can play your media files in the background easily without any hassle. It would also show a mini control pad on the notification bar so that you can switch to another song. I have personally found this great feature very useful for me.

Do you like listening to online music? If yes, then it is also possible on the MX Player app where you can stream your favorite International, Bollywood and Regional hit songs. This app is potent and sleek with its built-in codes and decoders and also with its handy screen gestures. It is one of the reliable and trustworthy Media Android players available for the users right now.

So, what are you waiting for? Download it right now on your Android or IOS device!
