Bottom line

Internet users planning to switch to a safe and private browser must have come across Browsers like Brave and Vivaldi. Even though they aren't as popular as Chrome, Firefox, or Opera, Brave and Vivaldi have gained significant attention recently.

Internet users planning to switch to a safe and private browser must have come across Browsers like Brave and Vivaldi. Even though they aren't as popular as Chrome, Firefox, or Opera, Brave and Vivaldi have gained significant attention recently. These browsers are known names amongst individuals who prioritize their privacy and security. A private and secure browser is necessary, primarily when Big Tech is focused on collecting user data. But the question here is: Vivaldi Browser vs. Brave Browser- Which is Better? Join us as we quickly compare two popularity-gaining browsers: Vivaldi and Brave. Vivaldi has gained wide attention among Linux enthusiasts. It is known for its advanced tab management features and remarkable customizability. Whereas Brave, which is an impressive open-source web browser, is another popular option to choose from. Which one amongst them is better depends majorly upon personal preference and experience. However, we have brought all the in-depth details to help you understand which browser to use. As web browsers serve as our gateway to the internet, selecting the right one becomes important. Here we start the hot debate of Vivaldi vs Brave. We aim to assist you in making an informed decision about your browser.

Vivaldi Vs. Brave Browser: An Introduction

Vivaldi is a freeware web browser created by Vivaldi Technologies. It was founded by the former co-founder and CEO of Opera Software, Tatsuki Tomita and Jon Stephenson von Tetzchner. Vivaldi particularly appeals to technically inclined individuals but is designed to target general users. Vivaldi browser uses its proprietary modifications and aims to revive the functionalities of the Presto-based Opera. It excites those former Opera users who were satisfied with the loss of distinctive features due to the transition from the Presto layout engine to a Chromium-based browser. On the other hand, Brave is a free and open-source web browser developed by Brave Software, Inc. It is built on the Chromium framework and stands out as a privacy-focused browser by default. Brave automatically blocks certain advertisements and website trackers, enabling users' privacy and security. However, Brave still allows users to enable ads for rewarding attention with Basic Attention Tokens (BAT) (a cryptocurrency). Users can further use BAT for payments to registered websites and content creators. It adds up as a unique approach to advertising and monetization.

Vivaldi Vs. Brave - Quick Comparison

While Vivaldi and Brave are both effective, both have some differences and conflicts. Here we have covered some key aspects of differentiation between Vivaldi and Brave browsers, so our users can make an informed choice.

Syncing Options

Syncing works differently in Vivaldi and Brave. Vivaldi features an account that can sync data. Brave forms a QR code or a Sync code for connecting two different devices. The below table show details of what both browsers support: Vivaldi: Bookmark, Password, Autofill, Speed Dial, Extension, Notes, Reading List, Typed History Brave: Bookmark, Password, Autofill, Extension, History, Open Tab, Setting, Theme, Apps

Platform Compatibility

Vivaldi is compatible across Windows, macOS, and Linux and has an Android app, but still no version for iOS users. Similarly, Vivaldi is the world's first web browser for the Android automotive operating system. Brave is available on Android, iOS, Windows, and the App Store for iPhone devices.

Privacy and Security

When comparing Vivaldi and Brave, privacy and security are the most important to consider. Both browsers offer strong tools and functionalities, but privacy differs. Vivaldi comes with multiple privacy and security options. It offers three blocking options: No Blocking, Block Trackers, or Block Trackers and Ads. It allows individual websites to manage to block/allow in the browser settings. Using some Google services, Vivaldi offers additional security measures, including phishing and malware protection. With DNS, it also helps with navigation errors and autofill assistance. Vivaldi does not track user activity but collects minimal anonymized usage data. It, however, comes with built-in ad and tracker-blocking features. Vivaldi comes with multiple privacy-focused extensions allowing users to improve their privacy. On the other hand, Brave is more prominent regarding privacy and security. With the Brave Shield feature, this browser takes an advance and proactive approach to privacy. Brave Shield automatically blocks third-party cookies and ads. It even protects users from ad trackers. Users can navigate to Setting and disable Brave's own ads. Brave offers users to choose between two levels of protection: Standard and No Protection. The standard level allows users to check unhealthy websites, downloads, and extensions. In contrast, No Protection disables any checks. Brave also includes HTTP to HTTPS upgrader to ensure secure data transmission. The choice between the two browsers ultimately depends on individual preferences and priorities.

Speed and Performance

Another major point to consider when comparing Vivaldi and Brave is 'Speed and Performance.' A browser that lacks in any of these fields is surely not worth spending time and energy on. Speed and performance are important, and Vivaldi and Brave offer commendable performances. Both browsers have their foundations built on the Chromium engine. They seek to benefit from the underlying engine's optimized performance and thus allow for fast browsing experiences. Brave, however, has some advantages in speed and performance thanks to its built-in ad-blocking capabilities. Brave blocks ads and thus reduces the number of resources that are required to load web pages. This, as a result, potentially faster page loading times. On the other hand, Vivaldi has a slightly slower page loading time than Brave. However, keeping aside the browsers' speed and performance, an individual browsing experience can also vary depending on internet connection speed, device specifications, website, etc.

User Interface

Both Brave and Vivaldi offer unique user experiences. Brave is known for its clean and minimalistic look, which aids in a streamlined web browsing experience. It comes with various customization options, including a wide address bar, the ability to display full URLs, tab search buttons, and a show/hide home button. Brave also allows its users to light and dark themes out of the box. It also supports themes available in the Chrome Store. Whereas Vivaldi, by default, has a more feature-rich interface. Its quick access panel, a search bar positioned to the right of the address bar, and additional elements add to the user's ease. It, by default, comes with a wider variety of themes for smooth editing and customization of the themes. Overall, Brave is a straightforward and customizable browser with a clean interface. Vivaldi is for those who want a rich user interface with abundant accessible options.

Unique Features

Vivaldi's Unique Features

- It incorporates a sidebar to access bookmarks, notes, and downloads quickly. This feature allows easy navigation and organization.
- It streamlines the user's communication experience by integrating an email client directly into the browser.
- With advanced tab management features like tiling and tab stacking, Vivaldi allows organizing and working with multiple tabs without glitches.

Brave's Unique Features

- With its unique approach to online advertising via Brave Rewards, this browser allows users to choose privacy-respecting ads and earn Basic Attention Tokens (BAT).
- It comes with built-in ad-blocking capabilities for auto-blocking unwanted ads. This feature reduces the clutter on web pages and thus enhances browsing speed and overall user experience.

Customization

Regarding customization, Vivaldi is the most customizable browser and simply excels. Vivaldi even excels in this context over Opera. It comes with highly customizable tab positioning options enabling users to personalize their tab management experience. Vivaldi also offers a tab stacking feature for efficiently organizing all those multiple tabs. Besides that, with its comprehensive themes, Vivaldi allows changing the background image of new tabs and the colors of the user interface. Users can simply visit the Vivaldi Settings window and navigate with the customization settings. Whereas Brave, on the other hand, offers limited customization options. This browser allows users to create tab sets or groups with a specific number of tabs per set. Users can color Tabs in Brave depending on the theme color and check via the tab preview feature. However, besides that, it doesn't have any more extensive browser customization options.

Password protection

Both Vivaldi and Brave offer password-saving and auto-filling features. With such features, users can relax for improve convenience and security. Vivaldi and Brave allow users to save passwords for the websites they visit. It is basically for allowing the automatic filling of login forms in the future. Besides that, to ensure the security of stored passwords, Vivaldi and Brave require its users to log in with their device's password and then only allowed to access the saved passwords. Unlike Vivaldi, Brave also offers an additional Password Management feature. It allows users to import their passwords from a CSV file and then centralize and consolidate them in one place. This feature can be useful when users have passwords stored in other applications or browsers which they want to transfer to Brave.

Community and Support

Vivaldi has a dedicated and engaged community. They actively participate in the browser's development through forums and benefit from responsive interactions with the Vivaldi team. They provide a comprehensive help center and email support. Brave focuses on privacy and thus has a rapidly growing community. Their active Brave Community forum and extensive online resources, including a help center and tutorials, demonstrate their commitment to user support. Both browsers prioritize community involvement and user feedback in their ongoing development.

Search Engine Settings

In Vivaldi Browser:-

- Default Search Engine: Yahoo
- Private Mode Search Engine: DuckDuckGo
- Other search engines include Bing, Qwant, Ecosia, and Startpage.

In Brave Browser:-

- Default Search Engine: Google
- Private Mode Search Engine: Brave Search
- Other search engines include Yelp, Neva, Ecosia, Qwant, and Startpage.

PROS and CONS

Vivaldi

Pros

- It offers access to most Chrome extensions
- With quick commands, it allows easy access to settings, history, and bookmarks
- It offers customizable keyboard shortcuts
- Its' customizable interface comes with the placement of tabs, an address bar, and bookmarks
- Its web panels offer convenient access to websites
- Its Notes feature allows saving and organizing web page notes

Cons

- It isn't available on all platforms
- It has similar security risks to Chrome
- Users may experience occasional freezing issues
- It doesn't have any built-in ad blocker

Brave

Pros

- It emphasizes strongly on privacy and security
- It comes with a built-in adblocker and tracker blocking
- Its Brave Attention Token rewards system is useful
- It aids in a fast-browsing experience

Cons

- It doesn't offer a built-in reader view (requires an extension)
- It comes with similar security risks as Chrome

Vivaldi Browser Vs. Brave Browser- Which One Is Better?

Both Vivaldi and Brave are excellent browsers, each with its strengths. Vivaldi offers extensive customization and advanced user tools and is perfect for users who prioritize personalization. Brave prioritizes privacy and offers features like ad and tracker blocking and is ideal for those who seek privacy as their primary concern. Both browsers provide solid performance, but Brave here has a slight edge.

Bottom Line

The choice between Vivaldi and Brave ultimately depends on users' needs and preferences. It is better to try both and find what suits you the best.
