Bottom line

In the world of the rat race that is brimmed with innovative technologies, every day, you will encounter bright minds giving birth to the latest ideas in the field of technology to bring in the coolest gadgets.

In the world of the rat race that is brimmed with innovative technologies, every day, you will encounter bright minds giving birth to the latest ideas in the field of technology to bring in the coolest gadgets. When you talk about the Mac universe, people can see a significant difference between the MacBook Air and MacBook Pro.

Also, the world can see so many crucial differences in features and specs between the two devices. Furthermore, for the perfect personification of performance and style, the MacBook laptop series are crowned as the top one. Such popularity is its MacOS operating system and the classic Apple design.

Difference Between Macbook Air and Pro

Nonetheless, there are multiple MacBook models, and hence, it is difficult to find an ultimate model for you that is the best. Therefore, we have compiled the difference between MacBook Pro and Air in this guide.

Specifications: MacBook Air Vs. MacBook Pro

The MacBook Pro and MacBook Air specs can have a lot of variations based on the configuration you wish to have. One can adjust the specifications to a better state to meet your requirements. For example, one might want a strong storage facility or a powerful processor. Also, there are two different sizes for MacBook Pro 13 & 15 inches.

So, below, see the specs of both the new MacBook Air and the new MacBook Pro.

At a very first glimpse, the basic model of Mac seems more or less quite the same. However, it is essential to observe that the quad-core has way more performance & functionality than the dual-core when comparing the processor.

Furthermore, while starting the up-gradation of the MacBook Pro, you'll be sure to get an abundance of power compared to MacBook Air.

Nevertheless, this doesn't necessarily mean that the MacBook Air is poor in performance or is weak. On the contrary, such a model will offer you excellent performance for most of your tasks. For example, you can get a fantastic experience of easy browsing the internet, doing light photo editing, streaming videos, and replying to emails.

One more fundamental difference between these two models is screen size options. For example, one can have a 13-inch MacBook Air. However, the MacBook Pro is available in 13 & 15-inch sizes.

The Pro version has more RAM, a different graphics card, a better screen, and more storage. On the other hand, MacBook Pro is hands-down much better with powerful processors in its model for people who require a laptop that performs heavy and rigorous multitasking plus activities, including graphic designing, video editing, or audio editing.

Nonetheless, most people are possibly happy and satisfied with what they have with the MacBook Air.

Design: MacBook Air Vs. MacBook Pro

People recognize the iconic Apple logo on your Mac laptop within no time. But, there are some differences in the MacBook Air and MacBook Pro design.

Conversing more about the design, the 13-inch MacBook Pro and the 13-inch MacBook Air have the aluminum finesse model. Moreover, both of these models offer silver and grey options.

On the other hand, the MacBook Air has another feather in its cap, considering its color option has a golden color option in its series. Beyond that, both these devices have an identical appearance.

Discussing the display, MacBook Air has a decent one. Also, it is not as fascinating or brighter as the one with MacBook Pro.

In the upgraded version of 2020, considering the Air, Apple has put aside its puzzling and questionable butterfly keyboard, having authentic scissor-consisting switches.

There are the same changes in both 13-inch and 16-inch MacBook Pro models. The list of amazing features of both the laptop sizes continues with the clickable trackpad that is best for dragging windows, using multitouch gestures, and selecting text.

The Pro and the Air offer you USB-C ports that feature Thunderbolt 3-compatible type. Such ports have a few varieties, such as high-speed data transfer and charging.

Both Pro and Air comprises a 3.5mm headphone jack, stereo speakers, and 720p webcams. In addition, the Pro laptop includes an excellent dynamic range that gives you better audio if you talk particularly about sound. On the other hand, the MacBook Air welcomes itself with additional microphones. Siri can quickly and easily catch your voice with such a great feature.

Talking about papers also, it may seem like Air is thicker than the MacBook Pro. However, MacBook Air comprises a tapered design. Hence, it would give you a much thinner feeling when you hold it in your hands. Also, the MacBook Air includes a quarter-pound and a full pound, much lighter than the Pro models of the Mac line (it depends on the size you prefer), making it very portable.

One more significant difference is that the Pro comprises the Touch Bar of Apple, crucially a thin and large touchscreen. Also, it takes the place of the function keys row. Moreover, it allows people to handle several features depending on the open app. Further, some people admire the feature of the Touch Bar. However, most people won't require it.

Performance: MacBook Air Vs. MacBook Pro

Seeing one more prominent difference residing between the MacBook Pro & MacBook Air is "Memory." If you consider 16-inch MacBook Pro, it has its launch with vanilla sticks of DDR4. The frequency with which it works is 2,667MHz. On the other hand, the model of Air in the initial of the year 2020 uses LPDDR4X memory that works at 3,733MHz.

The Air model usually indicates that it is lightweight and portable, as in the name itself. On the flip side, the model of MacBook Pro comprises excellent features such as top-notch performance. Nevertheless, it's slightly heavier.

Portability

Further, the MacBook Air works for approximately 9 hours 30 mins when operating on light surfing on the internet. Also, you can watch 10 hours of video and invest 3 hours more for running intensive tasks.

Vocalizing about the average day that includes abundant web apps, Chrome tabs, Spotify, and Slack consumes nearly 6 hours from your battery life. Conclusively, it's the same battery life consumption as the MacBook pro.

According to Apple, the 16-inch MacBook Pro work for around 11 hours. In this, you can do video streaming or web browsing. Regularly, this model includes Spotify, Slack, and many browser tabs, which contribute to around 5-6 hours nevertheless.

The Wrap Up Speaks

The 13-inch Pro has the applause of most people. The MacBook Pro & the MacBook Air might seem identical. However, the two stand at different ends, based on working. People who want the sheer portability but can compromise with performance as they don't need much can try the MacBook Air.

On the other hand, if you want a fusion of performance and portability, go with the 13-inch MacBook Pro. Moreover, for people who require ultimate performance, then the 15-inch MacBook Pro is recommended. Further, talking about the conclusion and comparison of both these versions, the 13-inch MacBook Pro is the perfect and best for most people.

All in all, if you do not want to hurt your pocket, then the impressive MacBook Air with the pricing of \$999 is a wonderful option. It is also to be noted that Apple is planning to launch its first ARM hardware-based system other than the normal Intel-based system.
