In brief

Twitter is rolling out a Quality Filter feature for its mobile app that removes spam, bot-generated tweets, and duplicate content from your notifications. To enable it, go to the Notifications tab, tap Settings, and turn on the Quality Filter.

The biggest micro blogging platform Twitter is introducing a new feature to its mobile application, the 'Quality Filter' option. The new filter option will let you to control the notification you are getting in twitter, by letting you to avoid getting notifications from bots, spammers etc.

The company was getting complaints against these issue for a long time and now they came up with the solution. According to the twitter blog, the new feature have a Quality Filter Button in the notification, when turned on, you will not get notification by bots, spammers or even the repeated tweet of same item.

To activate this new filter, go to the Notifications tab in the Twitter mobile app, hit the Settings button and turn on "Quality filter."
